

BUCK

Want to know a secret?
Promise not to tell?

BUCK IS A 100 YEAR
TIME CAPSULE!!!!

Who will open it?
We don't know!

What's inside? Several items. The carver inserted present-day (2011) memorabilia to be discovered in 100 years. The only item we know about is the carver's business card. He left it inside "in case they need someone to make repairs at that time".

Toads & Frogs

Toads have brown bumpy dry skin and frogs have smooth green skin. Toads have short legs and crawl slowly while frogs have powerful legs and can jump very quickly. Toads live on land. Frogs live in or near water. Toads and frogs eat insects like flies and mosquitos, using their long sticky tongues to catch them. They both have 4 fingered hands and 5 toed legs.

Frogs and toads are known as "indicator species". Scientists study them because the health of the frogs and toads indicates the health of the overall environment.

LILLY

Carver: Myrl Phelps

Sponsor: Steve Schnibbe

What is Lilly holding? That is called an egg mass. If you follow Lilly's "necklace", you'll see the frog's lifecycle. Starting with the egg, the lifecycle moves through tadpole, tadpole with legs, froglet, then finally, like Lilly, an adult frog. This exact process of metamorphosis is completely unique to amphibians.
