

FLAMES

CARVER: ALICE PORTER

OGDEN, IOWA

SPONSOR: MARIE WHITE

What a lucky day for Flames and his feathered friend! They have found a vine of guess what? Fox Grapes! Fox grapes are the most common wild grape in the Adirondacks. They look delicious but they make much better vinegar than they do wine!

!!!  LADYBUG  LADYBUG  LADYBUG !!!

As you look around The Adirondack Carousel, you'll notice a lot of Ladybugs! Why?

1. The Nine-Spotted Ladybug is The New York State Insect
2. The Ladybugs create a "matched set" out of our unmatched animals
3. (The real reason) Because nothing is more fun than a Ladybug hunt!

Every day at The Adirondack Carousel you will hear children moving from animal to animal "Ladybug! Ladybug Ladybug!"

(If you're hunting Ladybugs, Flames will be your biggest challenge!)

RED FOX

The Red Fox is the largest of the Fox family. They are carnivores and will eat any small creatures that they can catch. Foxes need to be careful because coyotes and eagles want to eat them! The fox is a canine but their behavior is more catlike than doglike. They will check their surroundings by standing on their hind legs and sniffing the air. They can hear a watch ticking or a mouse squeaking from 120 feet away. And if a bunny dares to twitch it's ear, the fox will see it.

The Red Fox is one of the cutest animals in our woods. Sometimes it looks like they're smiling at you. They are not! They are either afraid of you or they are wondering what you taste like. Either way, give them their space!
