

# JOHN

Carver: William Underwood Endicott, NY  
Sponsor: Edie Crawford

John Deer (a doe) is one of the carousel animals that is life-size. John's adornments represent the clans, symbolisms, and teachings of The Native American Abenaki Nation.

Like The Abenaki did before us, current residents of The Adirondack Park strive to maintain a reciprocal relationship with the land and with the water.

## WHITE-TAILED DEER

White-tailed Deer are most active at dawn and dusk. They have good eyesight, excellent hearing and can run up to 30mph. Considered athletes of the forest, in a single bound these deer can leap forward up to 30' and up to 8' high! They are not aggressive and prefer flight to fight.

# BEETHOVEN

Carver: Carl Dion  
Sponsor: Mr. & Mrs. Nicholas Adams

In the winter, Beethoven waits for you inside where it's warm and dry. In the warmer months you'll find him hanging around outside the front door, but sometimes he's nowhere to be found!

Beethoven likes to get out and see his town. Sometimes he wanders to the farmer's market or The Mercantile. Sometimes he seems to have no destination at all and just wanders around town handing out lollipops!

## MOOSE

Moose are solitary animals with long bodies, long legs, and thick insulating fur. They eat vegetation, twigs, branches and dead wood. Moose can run at 35 mph and can swim steadily for hours. They have poor eyesight but excellent senses of hearing and smell.
