

RANGER

Carver: Carl Borst
Rotterdam, NY

Sponsor: Stewart's Shops

When things need to be fixed at the carousel, it's Ranger to the rescue. Ranger is the carousel mechanic's best friend because he has all the tools!

The carousel requires regular maintenance such as bearing grease, chain lubrication, and regularly checking that all fasteners are tight and in good condition. Safety checks are performed every day.

RACCOON

Raccoons are native to all of North America. They can roam up to 10 miles in a day or night in search of food. They adapt well to all types of climate and terrain.

Raccoons are mammals and are very smart. They can figure things out nearly as well as monkeys can.

Raccoons have dexterous claws which they use to handle small objects and tasks in a methodical manner. They can easily untie shoelaces or steal from a misplaced wallet.

Raccoons have a keen sense of smell and excellent eyesight. They have been known to use over 200 distinct sounds when communicating. Raccoons are shy but sometimes appear friendly. Even so, they do not make good pets. In most states it is illegal to domesticate them.
